**IMPORTANT INSTALLATION INSTRUCTIONS**

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TO REDUCE THE RISK OF SEVERE INJURY OR DEATH TO PERSONS:</strong></td>
</tr>
</tbody>
</table>

1. READ AND FOLLOW ALL INSTALLATION INSTRUCTIONS.
2. Install only on a properly operating and balanced door. A door that is operating improperly could cause severe injury. Have qualified service personnel make repairs to cables, spring assemblies and other hardware before installing the operator.
3. Remove all pull ropes and remove, or make inoperative, all locks (unless mechanically and/or electrically interlocked to the power unit) that are connected to the door before installing the operator.
4. Installation of this door operator must be done by a qualified installer.
5. Verify that the operator is correct for type, size of door and frequency of use per the operator specifications.
6. Install the door operator at least 8 feet (2,44 m) or more above the floor if the operator has exposed moving parts. Covers or guarding, provided by the manufacturer, must be installed when the operator is mounted less than 8 feet (2,44 m) above the floor.
7. Do not connect the door operator to the source of power until instructed to do so.
8. Locate the control station: (a) within sight of the door, (b) at a minimum height of 5 feet (1,5 m) above floors, landings, steps or any other adjacent walking surface so small children cannot reach it, and (c) away from all moving parts of the door.
9. Install the Entrapment Warning Placard next to the control station in a prominent location.
10. For products having a manual release, instruct the end user on the operation of the manual release.
11. If you have any questions about the safety of the door operating system, do not install the operator, contact Manaras-Opera at 1-800-361-2260.

For technical support, please call 1-800-361-2260 or visit [www.manaras.com](http://www.manaras.com) for more information.

3  Door & Operator Hardware

3.1  Delivery of Operator

Upon delivery of your OPERA jackshaft operator, inspect the unit immediately for any shipping damages. Verify that you have received all the hardware parts pertaining to your operator model, as listed in Table 3 and shown in Figure 3. If ordered, other items such as radio controls or other types of optional equipment may be present. If any item is missing or if there is evidence of damage, call the transport company or your direct supplier.

NOTE: Install the Entrapment Warning Placard (shown in Figure 4), next to the control station, visible in the area of the door.

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.
4 Operator Installation

4.1 Operator Mounting Options

The jackshaft operator line has a dual output shaft. These operators may be wall-mounted on either the left hand side or the right hand side of a sectional door. They can also be hood-mounted, using BRACKET111 (sold separately), or shelf-mounted on either side of the door.

The standard jackshaft hoist model comes with a chain hoist located on the right of the operator. If the application requires that the chain hoist be located on the left of the operator (ex: rolling doors, left operator hood mounting), it must be requested at time of order. **Do not attempt to modify the chain hoist yourself.**

This operator is not intended to be installed on horizontal slide doors.

4.2 Operator Mounting Holes

The operator has exposed moving parts and to prevent access to the pinch points, the operator must be installed at least 8 feet (2.44 m) or more above the floor. Alternatively, covers or guarding, provided by the manufacturer, must be installed when the operator is mounted less than 8 feet (2.44 m) above the floor.

1. Ensure that the wall or mounting surface provides adequate support for the operator. The surface must be rigid enough to prevent any play between the operator and door shaft. Manaras-Opera recommends the use of BRACKET111 for hood-mount application.
2. Locate the four mounting holes, as shown in Figure 7.
3. The optimum distance between the door shaft and the operator drive shaft is between 12" and 15".
4. Secure BRACKET111 to the end bracket of the rolling door or mount the operator to the wall with 3/8" thru-bolts. If the wall construction prohibits the use of thru-bolts, then appropriate and sufficiently sized lag bolts and anchors may be used.
5. Only tighten the bolts after having adjusted tension of the drive chain, as shown in section 4.3, p.8.
6. Ensure that the door and operator shafts are parallel.

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.
4.3 Sprockets, Spreader Bar and Drive Chain Installation

The hardware components shown in Figure 8 have been supplied with your operator.

1. Place the door sprocket loosely on the door shaft.
2. Place the operator drive sprocket on the appropriate side of the operator and align it with the drive sprocket of the operator.
3. Lock the operator and door sprockets in place by inserting the keys and tightening their respective set screws.
4. Wrap the operator drive chain around the door sprocket and the operator sprocket. Shorten the drive chain to the appropriate length. Use the chain link to attach the operator drive chain together.
5. Slide the operator to tighten the drive chain and then firmly tighten the mounting bolts.
6. Check the tension on the chain (there should be no more than a 1/4" of slack when the chain is depressed between the sprockets).
7. Manaras-Opera recommends the use of a chain spreader (sold separately).

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.

Figure 8 - Hardware Components
5 Operator Control Box

To open the control box cover, loosen the screw at the base of the cover. If the cover cannot be fully opened, the retaining arm may be used to hold the cover in other positions, see Figure 9.

After installation, allow for proper clearance upon opening the control box cover. If the cover is obstructed from opening, it is possible to remove the cover by unscrewing it from the box, see Figure 10.

Always close the cover before operating the door.
6 Manual Hand Chain and Disconnect Chain

6.1 Installation

6.1.1 Chain Hoist (Opera-H / SH / HJ)
Before pulling the hand chain through the pocket wheel, pull the limit cam’s retaining bracket back. Turn the cams to the center of the limit shaft to be sure that they are not being mechanically driven through their normal limit switch end positions.

1. Run the hand chain through the pocket wheel and through the chain guide, see Figure 11.
2. Allow both ends of the chain to hang down toward the ground until both ends are approximately 2 feet (0.6 m) from the floor. Cut the hand chain if necessary.
3. Connect both ends of the hand chain together.

6.1.2 Disconnect Chain (Opera-J / SH)

1. Link the disconnect chain to the hook located at the extremity of the operator's disconnect mechanism, see Figure 12.
2. Install the handle under the chain keeper to facilitate handling of the chain.
3. Under the handle, make a knot in order to fasten the end of the chain.

6.1.3 Emergency Egress (Opera-HJ)
This operator is built to receive a quick disconnect in case of an emergency egress.

1. Pass the cable housing (from the emergency egress control) through the holes provided on the frame of the operator, see Figure 13.
2. Attach the end of the egress cable to the disconnect lever.
3. Secure positioning of the cable housing with two adjustment collars.
6.2 Operating Mode

6.2.1 Opera-H (Hoist-a-matic® Chain Hoist System)

The automatic emergency chain hoist disconnect mechanism is provided in order to operate the door manually. A floor level disconnect is not required. In one simple step and by pulling the hand chain in the desired direction, the following operations may be successfully completed, see Figure 14.

1. Manual Mode
   Pull chain on either side to operate door.

2. Return to Electric Mode
   Wiggle chain until it moves freely.

3. Storage
   Follow the 3 steps shown below to attach the chain (when not in use) to the chain keeper.

![Figure 14 - Hoist-a-matic®](image)

6.2.2 Opera-J

This operator has a floor level disconnect to disconnect the door from the electrical motor and is ready to be manually operated, see Figure 15.

![Figure 15 - Floor Level Disconnect Chain](image)

For technical support, please call 1-800-361-2260 or visit [www.manaras.com](http://www.manaras.com) for more information.
6.2.3 Opera-HJ
See section 6.2.1 for Chain Hoist Operation or see section 6.1.3 for Direct “on-the-door” Manual Operation.

Activation of the quick disconnect keeps the operator disconnected mechanically and electrically for manual operation.

6.2.4 Opera-SH
This operator has a floor level hoist engagement lever to:
- disconnect the electrical control of the operator
- release the brake
- engage the manual hoist mechanism, see Figure 16

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information

Figure 16 - Hoist Engagement and Hoist Operation
7 Limit Switches & Limit Cams: Adjustment & Functionality

WARNING
To reduce risk of SEVERE INJURY or DEATH to persons:
• Do not attempt to make limit switch adjustments unless power has been electrically disconnected.

7.1 Limit Switch Functionality

Open Limit Switch and Advanced Open Limit Switch
When activated, the Open Limit Switch will stop the operator while the door is travelling in the upward direction. Should be adjusted accordingly to stop door in fully opened position. The Advanced Open Limit Switch is used for a radio-control feature and to activate the Timer to Close feature (if used).

Close Limit Switch and Advanced Close Limit Switch
When activated, the Close Limit Switch will stop the operator while the door is travelling in the downward direction. Should be adjusted accordingly to stop door in fully closed position. The Advanced Close Limit Switch is used for the operation of a reversing edge or external entrapment protection devices. With this limit switch, the floor is not considered as an obstacle, therefore the door does not reverse its movement once it reaches the floor.

7.2 Limit Switch Adjustments: Open and Close Cam Settings
This operator is equipped with the ACCU-CAM® feature, for precise and quick one-handed limit setting adjustments. To adjust the limit cams, see Figure 17.

1. Pull the cam's retaining bracket back.
2. Turn the cams for limit adjustment: turning cams toward the center of the limit shaft increases door travel or turning the cams toward the limit switch decreases door travel.

7.3 Advanced Limit Switch Adjustments
The Advanced Close Limit Switch must be field adjusted in order to deactivate the reversing edge or external entrapment protection device at a maximum of 6 in (15.2 cm) from the floor. The adjustment can be performed by changing the position of the Advance Close Limit Switch on its slotted support bracket.

Figure 17 - Limit Switches and Cams Adjustment

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.
### 7.4 Limit Switch Adjustment Using Manual Hand Chain (if applicable)

**Table 4 - Limit Switch Adjustment Procedures**

<table>
<thead>
<tr>
<th>Limit Switch</th>
<th>Adjustment Procedures</th>
</tr>
</thead>
</table>
| **Open Limit** | 1. Using the hoist, manually raise the door to a nearly opened position or desired open position.  
2. Pull the cam-retaining bracket from the Open side, see Figure 17, and rotate the Open cam manually until it activates the Open Limit Switch sufficiently so that a “click” can be heard.  
3. Release cam-retaining bracket and make sure that the bracket **engages** in the slots of both cams. |
| **Advanced Close Limit** | 1. **Using the hoist, manually lower the door to approx. 6” above the ground.**  
2. Pull the cam-retaining bracket from the Close side, see Figure 17, and rotate Close cam manually until it activates the Close limit switch sufficiently so that a “click” can be heard.  
3. Release cam-retaining bracket and make sure that the bracket **engages** in the slots of both cams. |
| **Limit Switch Fine Adjustment** | 1. Limit switch fine adjustment SHOULD be done after the main power supply is connected to the operator. Refer to section Operator Start-up, Table 6, p.22.  
Note: One (1) notch on cam is equal (=) to about ½” of the door travel. |

### 7.5 Limit Switch Adjustment Without Manual Hand Chain (if applicable)

**Table 5 - Limit Switch Adjustment Procedures (no hoist)**

<table>
<thead>
<tr>
<th>Limit Switch</th>
<th>Adjustment Procedures</th>
</tr>
</thead>
</table>
| **Open Limit** | 1. Move the open cam close to the open limit switch and proceed as per described in section Operator Start-up, Table 6, p.22.  
2. Release cam-retaining bracket and make sure that the bracket **engages** in the slots of both cams. |
| **Advanced Close Limit** | 1. Pull the disconnect chain for manual operation.  
2. **Manually open the door approx. 6” above the ground.**  
3. Pull the cam-retaining bracket from the Close side, see Figure 17, and rotate Close cam manually until it activates the Close limit switch sufficiently so that a “click” can be heard.  
4. Release cam-retaining bracket and make sure that the bracket **engages** in the slots of both cams. |
| **Limit Switch Fine Adjustment** | 1. Limit switch fine adjustment SHOULD be done after the main power supply is connected to the operator. Refer to section Operator Start-up, Table 6, p.22.  
Note: One (1) notch on cam is equal (=) to about ½” of the door travel. |
8 Electrical Wiring

**WARNING**

To reduce risk of SEVERE INJURY or DEATH to persons:

- All electrical wiring should be done by a qualified professional and in accordance to local electrical codes.
- Always shut OFF the main power before performing any electrical intervention.
- Use proper wire gauge for incoming power line and for accessory connections.
- Install operator main circuit breaker next to operator for easy access for power shut-off.
- Use separate knockouts on operator control box for accessories and main power cables.
- Always separate low and high voltage wires.
- Operator should be properly grounded to the building ground and to the main power supply ground lug.
- Always use suitable and appropriate rating circuit breakers for operator protection.
- Compare available power supply voltage to voltage on operator name plate prior to electrical connection. Failure to connect appropriate power supply voltage may cause serious damage to the operator.

**NOTICE**

- THE OPERATOR MUST BE ADEQUATELY PROTECTED AGAINST OVERCURRENT AND SHORT-CIRCUIT.
- PLEASE REFER TO LOCAL ELECTRICAL CODE.
- PLEASE REFER TO NATIONAL ELECTRIC CODE (NFPA 70) ARTICLE 430 SECTION IV (430,51 / 430,52 / 430,53).
- PLEASE REFER TO CANADIAN ELECTRIC CODE (CSA 22,1) SECTIONS 28-200 / 28-206.

Guideline to determine the branch-circuit rating of the protective device [A]:

Time Delay Fuse: 1,75 x FLA
Non-Time Delay Fuse: 3,0 x FLA

A fuse that does not exceed the next higher standard ampere rating shall be permitted.

Example: If FLA = 3,8A

- Time Delay Fuse: 1,75 x 3,8A = 6,65A → Standard fuse to use: 10A
- Non-Time Delay Fuse: 3,0 x 3,8A = 11,4A → Standard fuse to use: 15A
8.1 **Low Voltage (Controls) and High Voltage (Power) Connections**

1. Route the power line wire from the right of the control box, as shown in Figure 18.
2. Route all low voltage control wires from the left of the control box, as shown in Figure 18. KEEP LOW VOLTAGE WIRES SEPARATE FROM LINE VOLTAGE WIRES.
3. USE COPPER CONDUCTORS ONLY.

![Figure 18 - Low Voltage (Controls) and High Voltage (Power) Connections](image)

8.2 **Main Power Supply Connection**

<table>
<thead>
<tr>
<th>Single-Phase (115/230V)</th>
<th>Three-Phase (208/230-460-575V)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Live</td>
<td>Line 1</td>
</tr>
<tr>
<td>Neutral</td>
<td>Line 2</td>
</tr>
<tr>
<td>Ground Lug</td>
<td>Line 3</td>
</tr>
</tbody>
</table>

Correct motor rotation: Switch the BLUE and ORANGE motor wires on the contactor.  
Correct motor rotation: Switch ANY TWO incoming lines (phase) on the power terminal block.

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.
8.3 Wall-Button Connection

**WARNING**

- Wall controls must be mounted in clear view of the door, far enough from the door, or positioned such that the user is prevented from coming in contact with the door while operating the controls and at least 5 feet (1.5 m) above the standing surface.
- Keep low voltage wires separate from line voltage wires.
- Use copper conductors only.

**Push-Button Station (PBS) Connection**

**Figure 19 - STATION 020 / 084**
3-PBS Open / Close / Stop

**Figure 20 - STATION 041 / 049 / 056 / 076 / 078**

**Figure 21 - STATION 079**
3-PBS Open / Close / Stop with Key Lock-out

**Figure 22 - STATION 080**
3-PBS Open / Close / Stop with Key Lock-out and Light

**Figure 23 - STATION 001 / 081**
1-PBS Open

**Figure 24 - STATION 010 / 082**
2-PBS Open / Close
8.4 Optional Accessory Connections

**NOTICE**

- Photo cells must be installed facing each other across the door's path within 6" (15 cm) of the plane of the door and the beam no more than 5-3/4" (14.6 cm) above the floor.
- Keep low voltage wires separate from line voltage wires.
- Use copper conductors only.

### 8.4.1 Electric Photo Cells / Photo Eyes (Non-Monitored)

#### Through Beam Type

![Through Beam Type Diagram](image)

**Figure 25 - PHOTO 008**

#### Reflective Type

![Reflective Type Diagram](image)

**Figure 27 - PHOTO 018**

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information
8.4.2 Reversing Edge Device (Non-Monitored)

NOTICE

- If the door is controlled by any device other than a constant pressure push-button station on close, including a timer-to-close, a reversing edge must be connected.

Installation

Pneumatic Sensing Edge
1. Place the air switch in position, refer to Figure 30.
2. Place the air hose in position.
3. Use a coil cord or take-up reel to connect the air switch to the operator terminals. Install electric wires according to Figure 31 or Figure 32.
4. Connect one end of the air hose to the air switch.
5. Place the air plug in the other end of the air hose.

Electric Sensing Edge
1. Place the junction box in position, refer to Figure 30.
2. Place the sensing edge in position.
3. Use a coil cord or take-up reel to connect the sensing edge wires to the operator terminals. Install electric wires according to Figure 33.
4. Connect the sensing edge to the junction box.
5. N/A
8.4.3 Pull Cord & Key Switch

Figure 34 - PULLCORD 001 / 003 / 004 / 007

2-Position Key Switch

Recommendation: Put Control Board on C2 or E2 Mode (constant-pressure-to-close)

Place a jumper between #8 & #9 on the board
(Installer un cavalier entre #8 & #9 sur la plaquette)

Figure 35 - KEYSWITCH 010 / 015

2-Position Key Switch & Stop Button

Figure 36 - KEYSWITCH 019
8.4.4 External Single-Button Radio Control Receiver

Mount the Radio receiver directly on the terminal strip provided on the side of the control box.

Figure 37 - RADIO 014 or RADIO 015

Figure 38 - Other Radio Receivers with 4 or 5-wires

8.4.5 Vehicle Loop Detector

Twist the two (2) leads (wires) a minimum of 6 twists/foot.

Figure 39 - Vehicle Loop Detector

8.4.6 Other Accessories

Additional accessories are available, such as:

- External Mid-Stop Switch
- External Timer Defeat Switch

Please contact your dealer or our inside sales department at 1-800-361-2260 for further information.
9 Operator Start-up

![WARNING]

To reduce risk of SEVERE INJURY or DEATH to persons:
- Personnel should keep away from a door in motion and keep the moving door in sight until it is completely closed or opened. NO ONE SHOULD CROSS THE PATH OF A MOVING DOOR.
- Never go under a stopped, partially opened door.

1. Turn power ON.
2. Use the wall-button station (Open/Close/Stop), external entrapment device or jumper wires for testing, see Table 6.

Table 6 - Start-up and Testing Guide

<table>
<thead>
<tr>
<th>Test</th>
<th>Door Position</th>
<th>Action</th>
<th>Door Response</th>
</tr>
</thead>
</table>
| Open          | Door at 6" from the closed position                | 1. Press “OPEN” OR Momentarily touch #3 & #4 on the main terminal with a jumper wire.  
2. Check if door is stopped by Open limit switch.  
3. If required, re-adjust Open limit, as shown in Figure 17, p.13. | Door should open instantly. |
| Close         | Door at fully open position                        | 1. Press “CLOSE” OR Momentarily touch #3 & #5 on the main terminal with a jumper wire.  
2. Check if door is stopped by Close limit switch.  
3. If required, re-adjust Close limit, as shown in Figure 17, p.13. | - C2 mode: Door should close as long as the close button is activated.  
- B2 mode: Door should close instantly. |
| Sense Edge    | A) Door at fully closed position                   | Activate external entrapment device OR Momentarily touch #3 & #6 on the main terminal with a jumper wire. | Door should stay at closed position. |
|               | B) Door is closing (movement)                      | Activate the single-button transmitter OR Momentarily touch #7 & #8 on the main terminal with a jumper wire. | Door should close. |

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information
10 Clutch Adjustment

NOTICE

- The friction clutch is NOT intended to protect people. It is designed to protect the operator and door system against potential damage.
- The friction clutch is factory adjusted during final testing. Proper adjustments should be done on site according to the door characteristics and application.
- In order to avoid the door from getting damaged when the lock is on, the friction clutch must be properly adjusted according to the instructions below.

Best Practices Encouraged by Manaras-Opera

Manaras-Opera recommends the installation of a hard stop at the end of the tracks (ex. bolt, deformation of tracks, bumper spring, pusher spring, etc). With such installation, the door is prevented from running out of the tracks. The clutch (torque limiter) will prevent any damage to occur to the door system.

To adjust the clutch:

1. Unlock the jam nuts with two (2) 15/16” keys, refer to Figure 40.
2. Rotate the nut counter-clockwise to release the tension.
3. Gradually rotate the nut clockwise until there is just enough tension to permit smooth operation (while still allowing the clutch to slip if the door is obstructed).
4. Lock the jam nuts.

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information.
11 Electromechanical Circuit Programming (Contactor Circuit)

**WARNING**
To reduce risk of SEVERE INJURY or DEATH to persons:
• Manaras-Opera strongly recommends the use of external entrapment protection devices, especially in the case of momentary contact to close (B2 wiring or Timer to Close).

11.1 Run Mode Settings

**NOTICE**
• Always return the door to **fully closed position** before performing any program settings.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Functions</th>
<th>Operations</th>
</tr>
</thead>
</table>
| C2   | • Momentary contact to open and stop, constant-pressure-to-close with 3-button station.  
      • Activation of safety devices will reverse the door while closing.  
      • Auxiliary devices function as an Open control and will reverse the door while closing. | B2 Mode → C2 Mode  
Move RED wire from terminal #7 → #5. |

| B2   | • Momentary contact to open, close and stop with 3-button station.  
      • Activation of safety devices will reverse the door while closing.  
      • Auxiliary devices function as an Open/Close control and will reverse the door while closing. | C2 Mode → B2 Mode  
Move RED wire from terminal #5 → #7. |

User Instructions

IMPORTANT SAFETY INSTRUCTIONS

⚠️ WARNING

TO REDUCE THE RISK OF SEVERE INJURY OR DEATH TO PERSONS:

1. READ AND FOLLOW ALL INSTRUCTIONS.
2. Never let children operate or play with door controls. Keep the remote control (where provided) away from children.
3. Personnel should keep away from a door in motion and keep the moving door in sight until it is completely closed or opened. NO ONE SHOULD CROSS THE PATH OF A MOVING DOOR.
4. Test the door's safety features at least once a month. After adjusting either the force or the limit of travel, retest the door operator's safety features. Failure to adjust the operator properly may cause severe injury or death.
5. For products having a manual release, if possible, use the manual release only when the door is closed. Use caution when using this release with the door open. Weak or broken springs may cause the door to fall rapidly, causing severe injury or death.
6. KEEP DOORS PROPERLY OPERATING AND BALANCED. See Door Manufacturer’s Owner Manual. An improperly operating or balanced door could cause severe injury or death. Have trained door systems technician make repairs to cables, spring assemblies and other hardware.
7. SAVE THESE INSTRUCTIONS.

IMPORTANT

For more information or for immediate assistance, please contact your local dealer.

NOTICE

• The installer should perform a demonstration of the operator and it's accessories (ex: push-button station, radio control), external entrapment protection device and manual release for the end-user.

For instructions regarding the Hoist, Disconnect Mechanism and Emergency Egress, refer to the Installation Instructions found in section 6.2, p.11.
# Quick Fix Instructions

</tr>
<tr>
<td></td>
<td>✦ Poor radio control range.</td>
<td>➔ Bring the radio transmitter closer to the operator.</td>
</tr>
<tr>
<td></td>
<td>✦ Photo cells are not properly aligned or are obstructed.</td>
<td>➔ Clear the obstruction or re-align photo cells.</td>
</tr>
</tbody>
</table>
Maintenance Instructions

IMPORTANT SAFETY INSTRUCTIONS

⚠️ WARNING

TO REDUCE THE RISK OF SEVERE INJURY OR DEATH TO PERSONS:

• Inspections, service and repairs should be performed anytime a malfunction is observed or suspected.
• Only qualified persons should perform maintenance on a door operator and all safety precautions should be taken into consideration.
• When servicing, always disconnect operator from main power supply.
• KEEP DOORS PROPERLY OPERATED AND BALANCED.
• See Door Manufacturer’s Owner Manual. An improperly operated or balanced door can cause severe injury or death. Have qualified door system technicians perform repairs to cables, spring assemblies and other hardware.

1 Preventative Maintenance Schedule

1.1 Mechanical Inspection

The door area should always be kept clear of dirt, rocks or any other substances in order to insure proper operation. Maintenance of the door operator should be performed according to the schedule in Table 8 and Table 9.

Table 8 - Mechanical Inspection Schedule (Part 1)

<table>
<thead>
<tr>
<th>Time Frame</th>
<th>Inspection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Every Month</td>
<td>• Test the door’s safety features.</td>
</tr>
<tr>
<td></td>
<td>• Verify the brake function (if applicable).</td>
</tr>
<tr>
<td></td>
<td>• After adjusting either the clutch or the limit's travel, retest the operator’s safety features.</td>
</tr>
<tr>
<td></td>
<td>• Verify gear reducer's oil level (if applicable).</td>
</tr>
<tr>
<td>Every 3 Months</td>
<td>• Verify and adjust the clutch if necessary.</td>
</tr>
<tr>
<td>Every 6 Months</td>
<td>• Lubricate all moving parts. Bushings are oil impregnated and are lubricated for life.</td>
</tr>
<tr>
<td></td>
<td>• Verify that all mechanical parts function properly.</td>
</tr>
<tr>
<td></td>
<td>• Inspect the V-belt and adjust or replace if necessary.</td>
</tr>
<tr>
<td></td>
<td>• Manually operate the door. If the door does not open or close freely, correct the cause of the malfunction.</td>
</tr>
</tbody>
</table>
Table 9 - Mechanical Inspection Schedule (Part 2)

<table>
<thead>
<tr>
<th>Time Frame</th>
<th>Inspection</th>
</tr>
</thead>
</table>
| Once a Year | - Run the operator a few cycles:  
- Make sure that the door rollers are rolling smoothly on the track.  
- Listen to the motor: The motor should hum quietly and smoothly.  
- Verify that the limits operate quietly and smoothly: investigate any unusual noise.  
- Verify that the mounting bolts are holding the unit securely.  
- Inspect the unit for evidence of corrosion.  
- Change the gear reducer's oil, at the very least, after every 2500 hours of operation or once a year (if applicable). |

1.2 Electrical Inspection

It is recommended that the electrical maintenance inspections be performed at the same intervals as the mechanical maintenance inspections.

Table 10 - Electrical Inspection

<table>
<thead>
<tr>
<th>Time Frame</th>
<th>Inspection</th>
</tr>
</thead>
</table>
| Every Month | - Inspect the unit for evidence of corrosion on electrical wires and connectors.  
- Inspect the wiring compartment and remove any dirt from the control units.  
- Verify all the grounding wires and terminals for corrosion. Be particularly careful to verify the ground wires.  
- Verify the terminal strips to insure that all the screws are tightened.  
- Verify that the pneumatic edge or other entrapment protection devices installed on the operator are fully operational.  
- Verify the voltage at the input terminals while the operator is running. The voltage must not drop more than 10% momentarily. If the voltage drop is too deep when running, the relays may chatter and the contact points will wear prematurely and may eventually seize. Verify the power terminals for corrosion.  
- Verify the current consumption of the unit with an amp-meter. The current value should be consistent with the nameplate specifications. Investigate any anomaly. |
1.3 Band Brake Maintenance

**WARNING**

To reduce the risk of SEVERE INJURY or DEATH to persons:
- Be sure that the main power is OFF before performing any changes on the operator.

1.3.1 Changing a Brake Band

The brake band is preformed at the factory. Please insert the brake band carefully around the brake drum.

1. Remove solenoid cover

2. Remove link and used band brake

3. Replace band brake

4. Place the link

5. See brake adjustment on next page

Push solenoid plunger to reduce tension when removing or installing the band brake.

Be sure that the link is securely fastened on the two pins.
1.3.2 *Brake Adjustment*

The brake is factory set, however, after extensive use the brake may need to be adjusted.

1. **Remove solenoid cover**

2. **Loosen pivot nut**

3. **Adjust solenoid gap**

   - Pull the lever to adjust the gap between the plunger and solenoid body.
   - Gap must be between 1/4” and 3/8”.

4. **Tighten pivot nut**

5. **Check brake adjustment**

   - Manually push the plunger onto the solenoid body, and verify that the brake drum rotates easily by hand.

6. **Re-install solenoid cover**

For technical support, please call **1-800-361-2260** or visit [www.manaras.com](http://www.manaras.com) for more information.
## Troubleshooting Guide

### Table 11 - Troubleshooting Guide – Part 1

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Probable Cause</th>
<th>Suggested Action</th>
</tr>
</thead>
</table>
| **Door doesn't respond to any command** | ✷ Chain hoist is in engaged position (if applicable).  
✷ Disconnect chain is in engaged position (if applicable).  
✷ “Stop” button is stuck.  
✷ Control station is not connected or is wired incorrectly.  
✷ No power supply.  
✷ Overload thermal protection has been tripped.  
✷ Defective transformer. | ➔ Return the chain to its neutral position (electrical mode). Refer to p.11 for further details.  
➔ Release tension from the disconnect chain and secure the chain keeper. Refer to p.11 for further details.  
➔ Press and release any “Stop” button.  
➔ Verify and correct wiring.  
➔ Verify the incoming power line from the main breaker, making sure it has not tripped or blown a fuse.  
➔ Reset overload protection:  
  1. Press reset button on side of unit for 1-phase or let the motor cool down for 3-phase.  
  2. Verify manual operation of the door.  
➔ Verify and replace transformer. |
| **Door closes or by itself, operator doesn't shut off after door is closed** | ✷ Defective contactor.  
✷ Defective “Close” limit switch. | ➔ Verify and replace contactor.  
➔ Replace limit switch. |
| **Door opens by itself, operator doesn't shut off after door is open** | ✷ Defective contactor.  
✷ Defective “Open” limit switch. | ➔ Verify and replace contactor.  
➔ Replace limit switch. |
| **Door doesn't respond to “Open” command, but does respond to “Close” command** | ✷ Defective “Open” push-button or “Open” limit switch.  
✷ Loose wire on “Open” push-button or “Open” limit switch. | ➔ Replace push-button or limit switch.  
➔ Verify and correct wiring. |
| **Door doesn't respond to “Close” command, but does respond to “Open” command** | ✷ Defective “Close” push-button or “Close” limit switch.  
✷ Loose wire on “Close” push-button or “Close” limit switch. | ➔ Replace push-button or limit switch.  
➔ Verify and correct wiring. |

For technical support, please call 1-800-361-2260 or visit www.manaras.com for more information
**Warranty**

Manaras-Opera warrants its operators to be free from defects in material and workmanship under normal and proper use for a period of two years from date of invoice, unless otherwise stated. Mechanical, electrical and electronic accessories are warranted for one year from date of invoice, unless otherwise stated. Wearing parts such as clutch pads, v-belts, and brake bands are excluded from warranty.

Manaras-Opera's only obligation shall be to repair or replace defective equipment which does not conform to the warranty. Manaras-Opera shall not be liable for any injury, loss or damage, direct or consequential, arising out of the inability to use the equipment. Before using, Buyer and/or the ultimate User shall determine the suitability of the product for its intended use, and User assumes all risks and liability in connection therewith. The foregoing may not be changed except by an Agreement signed by an authorized representative of Manaras-Opera.

The articles that are replaced pursuant to the terms of this warranty shall be retained by Manaras-Opera, and the User is responsible for any freight costs relating to repair or replacement.

The foregoing warranty is exclusive and in lieu of all other warranties of quality, whether written, oral or implied (including any other warranty of merchantability or fitness for purpose).

The following are exclusions from warranty:

- If usage, product modification, adaptation or installation are not in accordance with our installation and operating instructions.
- If the product has been opened, dismantled or returned with clear evidence of abuse or other damage.
- If our written specifications are not properly applied by the Buyer when selecting the equipment.
- If our written instructions for installation and wiring of the electrical connections have not been followed.
- If our equipment has been used to perform functions other than the functions it was designed to handle.
- If Manaras-Opera equipment is used with electrical accessories (switches, relays, etc.) that have not been previously approved in writing by the Manaras-Opera Engineering Department.
- If electrical accessories and other components have been used in disregard of the basic wiring diagram for which they were designed.

All costs related to installation and re-installation of the Manaras-Opera equipment covered by this warranty are not the responsibility of Manaras-Opera. Manaras-Opera will not be responsible for any consequential damages following installation procedures performed by the Buyer or the User. If the Buyer resells any Manaras-Opera products to another Buyer or User, it shall include all of the terms and provisions of this warranty in such resale. Manaras-Opera's responsibility to any such Third Party shall be no greater than Manaras-Opera's responsibility under the warranty to the original Buyer.

**Returns**

No returns will be accepted without prior written authorization by Manaras-Opera. All returns must be accompanied by a Return Authorization Number issued by Manaras-Opera, and all unauthorized returns will be refused. The return shipment is to be freight prepaid by the Buyer, and under no circumstances shall the Buyer deduct the value of the returned merchandise from any remittance due. A restocking fee of 15% of the Manaras-Opera sale price will be charged for all returns not covered under warranty.

For technical support, please call 1-800-361-2260 or visit [www.manaras.com](http://www.manaras.com) for more information.
2X FASTER

RAPIDO™
TWICE AS FAST

OPEN AND CLOSE YOUR DOOR TWICE AS FAST WITH A RAPIDO OPERATOR FROM MANARAS-OPERA.

The RAPIDO™ features a door speed up to 2 times faster than standard models available to the commercial and industrial door market.

The RAPIDO™ increases the longevity of the complete door system, designed to speed-up industrial standard lift sectional doors while smoothly managing soft-starts and soft-stops.

CHOOSING THE RAPIDO™ IS SIMPLE WHEN TIME AND ENERGY SAVINGS IS A MUST.

On-board control and monitoring of external entrapment protection devices, provide speed managing features and enhanced performance and reliability.

*The RAPIDO™ operator is up to 2x the speed of a standard jackshaft operator.
