Manaras-Opera Yellow Zinc Hand Chain

Please note that Manaras-Opera will be supplying a hand chain coated with Yellow Zinc instead of Blue Zinc for the manual operation of jackshaft operators as of April 2007.

Features of the Yellow Zinc CHAIN 002

- Chain 002 is used for the manual operation of the chain hoist on jackshaft models: OMH, OPH, OSH, OGH, MGH, as well as for chain hoist modifications.
- The chain is coated with yellow versus blue zinc, therefore it is yellowish in color.
- Technical characteristics of the chain remain the same as the previous version.
- Testing shows that the yellow zinc coating resists corrosion significantly longer than the blue zinc coating.
- The chain is smoother to handle than previous version.
- The product code CHAIN 002 (sold under JXXX) and packaging bag remain the same.
- Selling price remains the same.
- For aesthetic reasons, we suggest that the two colors of hand chain not be mixed on the same operator.

The Yellow Zinc CHAIN 002 will be put into production as of April 2007.
