Manaras-Opera New Improved DRUM 004

Responding to your needs, Manaras-Opera has made an improvement to its drum used on operators with a brake.

The DRUM 004 applies to operator models which incorporate a brake: OSH, OGH, MGH, MTBH, MGT, MGSLD. It also applies to water/corrosion/explosion proof versions of these operators (if available).

The replacement BRAKE 011, 012, 013 as well as the drum brake and solenoid brake for OPJ options (MOD 111, 113) have also been updated.

Features of the Drum

- A new backing has been added to the drum in order to help prevent any brake or belt dust from penetrating the motor's ventilation holes.
- A decrease in dust helps to prevent a malfunction of the motor's centrifugal switch.

Pricing

- Operator pricing remains the same.

The new DRUM 004 has been implemented as a running change.
For further information, please contact your Manaras-Opera sales representative.
