

Product Announcement

New Drums Introduced - Steel Yellow Zinc Plated

Manaras-Opera Improves It's Drums on Multiple Applications

Manaras-Opera is pleased to advise that it has made improvements to it's drum brake assemblies.

DRUM 006 replaces **DRUM 001**
DRUM 005 replaces **DRUM 004**

What was improved

- The aluminum alloy drums have been replaced with yellow zinc plated steel drums.
- Steel yellow zinc plated drums have an increased lifetime in comparison to the aluminum alloy drums previously used.
- This also increases the lifespan of the brake bands and shoes, as well as increases the time between maintenance adjustments or component replacements.
- **DRUM 006** replaces **DRUM 001**; this improvement applies to **MTBH-APT/APE, BRAKE 014, MOD 113.**
- **DRUM 005** replaces **DRUM 004**; this improvement applies to **OSH/OGH/MGH/MGT/MTBH/MSL/MGSL, BRAKE 011/012/013, MOD 111.**

This improvement is available as of September 2009.
